Dear Mr Thompson,

RE: ECHOCARDIOGRAM RESULTS

I am writing regarding the echocardiogram (heart ultrasound scan) that was carried out following your recent attendance with chest pain.

The scan has now been reviewed by the Cardiology Team.

RESULTS

The echocardiogram demonstrates mild impairment of the pumping function of the left ventricle (the main pumping chamber of the heart). This finding is consistent with your previous history of myocardial infarction (heart attack).

Overall heart function remains stable when compared with previous assessments.

The heart valves appear structurally normal with no significant valve disease identified.

No evidence of significant fluid around the heart was seen.

SUMMARY

The findings are in keeping with expected long-term changes following your previous heart attack and there are no features requiring urgent intervention at this time.

Your symptoms are most consistent with stable ischaemic heart disease and angina. You should continue taking your prescribed medication as directed and continue to attend your routine cardiology follow-up appointments.

RECOMMENDATIONS

- Continue current cardiac medication.
- Maintain regular reviews with your GP.
- Continue use of GTN spray as prescribed for episodes of angina.
- Seek urgent medical attention if chest pain becomes more frequent, occurs at rest, or is not relieved by GTN.

If your symptoms worsen before your next appointment, please contact your GP or Cardiology Department for further advice.

Yours sincerely,

Dr James Patel

ECHOCARDIOGRAM REPORT SUMMARY

Patient: Michael Thompson

Hospital Number: SGH4528719

Date of Scan: 23 July 2025

Left Ventricle:

Mild impairment of systolic function.

Estimated Ejection Fraction:

45-50%

Right Ventricle:

Normal size and function.

Aortic Valve:

No significant abnormality.

Mitral Valve:

Trivial physiological regurgitation only.

Pericardium:

No pericardial effusion.

Conclusion:

Mild left ventricular systolic dysfunction consistent with previous myocardial infarction.

No significant valvular pathology identified.
